How to read it: 1. Work out the mother's lunar age on the conception date (page 2). 2. Find the conception date's lunar month in the 2027 date table on page 2. 3. Read the cell where that row and column meet. Boy cells are blue; Girl cells are pink and in italics, so the chart still reads in black and white.

For cultural interest and entertainment only — not a medical tool. The largest test of this chart (2,840,755 births, Villamor et al., 2010) found it no better than tossing a coin. Lunar dates: Hong Kong Observatory conversion tables. Free calculator and sources: chinesegendercalendar.org

Lunar age in one line

Lunar age = lunar year of the conception date − lunar year of the mother's birth + 1. A date before that year's Chinese New Year belongs to the previous lunar year. Example: a mother born on June 15, 1994 (after Chinese New Year 1994, February 10) who conceived on March 10, 2027 (after Chinese New Year 2027, Feb 6, 2027) is 2027 − 1994 + 1 = 34.

Common mistakes

- Using January–December as the columns. The columns are lunar months, which start at Chinese New Year.
- Using your everyday age. Lunar age is usually one or two years higher.
- Using your age today instead of on the conception date.
- For a date in January or early February, using the new year's row before Chinese New Year has arrived.
